#### REDACTED

Request IR-7:

2

1

- 3 What is Nova Scotia Power's cost of coal per ton each year from 2000 to 2015? Please
- 4 indicate where regulations and emissions targets (whether federal or provincial) have
- 5 changed the price or type of coal used.

6

7 Response IR-7:

8

- 9 Please refer to the figure below and Avon IR-26 which discusses the effect of emission limits on
- solid fuel cost increases between current and a decade ago.

11

Solid I	<b>Fuel Costs</b>
	CAD/MT
Year	(\$)
2000	58.93
2001	62.21
2002	64.89
2003	60.47
2004	58.78
2005	77.07
2006	80.16
2007	81.52
2008	85.72
2009	93.91
2010	105.83
2011	102.67

Date Filed: July 23, 2012

12

### **NON-CONFIDENTIAL**

1	Request IR-8:
2	
3	Does Nova Scotia have excess capacity to generate electricity greater than the currently
1	needs?
5	
5	Response IR-8:
7	
3	NS Power has excess capacity during the summer months, but does not have excess capacity
)	through the peak winter months. Please refer to Multeese IR-7.

Date Filed: July 23, 2012 NSPI (PC) IR-8 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-9:
2	
3	Re: PC IR 2 - Nova Scotia will have 2865 MW of installed capacity to meet a fall in peak
4	demand load of about 2250 MW. What is the cost per kWh and what is the installed MW
5	cost to ratepayers of providing this surplus generating capacity?
6	
7	Response IR-9:
8	
9	The installed capacity referenced in the PC IR-2 is the sum total of generator nameplate capacity.
10	Various factors explain the gap to forecasted peak demand.
11	
12	• Hydro, tidal, and wind are variable generating resources which operate at capacity factors
13	from 17 percent to 70 percent. Wind and tidal generation are largely non-dispatchable
14	and capacity values in the range of 35 percent have been derived to assume a contribution
15	to serve firm peak demand. These assumed capacity values are being re-evaluated in the
16	Renewables Integration Study presently underway.
17	
18	NS Power is required by Northeast Power Coordinating Council (NPCC) system design
19	criteria to maintain a Planning Reserve of 20 percent over Firm Peak Demand to limit the
20	probabilistic loss of firm load to less than one day in ten years.
21	
22	• Generating station electrical consumption reduces unit output available to the system
23	down to the Net Unit Capacity which is typically in the range of 90-97 percent of
24	nameplate capacity for thermal generating units.
25	
26	Accordingly, this is not characterized as surplus generation. Please refer to Multeese IR-7 and
27	Multeese IR-62.

### **NON-CONFIDENTIAL**

1	Request IR-10:
2	
3	How much of this surplus capacity(kWh and installed MW cost is for meeting the need to
4	provide firm back-up power for wind generators to meet provincial renewable energy
5	targets in 2020?
6	
7	Response IR-10:
8	
9	The impact on the generation reserve requirements on the power system made necessary by wind
10	generation integration is presently being evaluated as part of the Renewables Integration Study.

Date Filed: July 23, 2012 NSPI (PC) IR-10 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-11:
2	
3	What is the true cost of wind power per kWh in 2020 when back-up firm power standby
4	costs from other sources are all added in?
5	
6	Response IR-11:
7	
8	NS Power has not prepared this information as part of this Application. Please also refer to PC
9	IR-28.

Date Filed: July 23, 2012 NSPI (PC) IR-11 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-12:
2	
3	Does Nova Scotia Power's two-year rate hike plan take in to account any rate basing of
4	money for Muskrat Falls?
5	1. If yes, how much?
6	2. If no, will the cost of Muskrat Falls, (assuming it is approved) not be included in
7	rates until 2015?
8	
9	Response IR-12:
10	
11	The 2013 and 2014 test year forecasts do not include assumptions for the Maritime Link.

Date Filed: July 23, 2012 NSPI (PC) IR-12 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-13:
2	
3	How can the NSPI load forecasts reflect reality or the need for new generation capacity?
4	
5	Response IR-13:
6	
7	Like all electric utilities, NS Power must make energy and demand forecasts to provide input to
8	short- and long-term planning. Given the broad range of influences on this work, it is necessary
9	to draw upon surveys, econometric data, information supplied by customers, and informed
10	assumptions about the economic, demographic, and technological environment in the forecast
11	period. Please refer to DE-03-DE-04, Figures 3-7, 3-9, and 3-11 of the Application for data
12	respecting NS Power's historical forecast accuracy for the Residential, Commercial and
13	Industrial sectors.
14	
15	The recent closure decisions by Extra Large Industrial Customers are rare events that result in
16	significant changes in NS Power's energy forecast (though firm demand remains largely
17	unchanged by these events). Many of the assumptions faced by utilities in their long-term
18	planning processes can have equally significant impacts on resource planning. Accordingly,
19	exercises like integrated resource planning are important, but must be taken as directional rather
20	than strict action plans for future investment.

Date Filed: July 23, 2012 NSPI (PC) IR-13 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-14:
2	
3	Re: PC IR 3 Annual Capex spent by energy source on all generation including Muskrat
4	Falls and subsea cables from 2009 to 2015 is five years incomplete and does not reflect the
5	targets required for renewable energy by 2020. Why is this essential information not
6	projected?
7	
8	Response IR-14:
9	
10	The Application does not include forecast costs for years beyond 2014. NS Power anticipates
11	there will be a separate proceeding relating to the Maritime Link.

### **NON-CONFIDENTIAL**

1	Request IR-15:
2	
3	What provision has NSPI made to secure and hedge ratepayers against rises in future fuel
4	costs?
5	
6	Response IR-15:
7	
8	NS Power adheres to the fuel hedging practices that are outlined in the Fuel Manual that was
9	jointly developed with stakeholders. The Fuel Manual is available for viewing in the
10	Confidential FAM Data Room.

Date Filed: July 23, 2012 NSPI (PC) IR-15 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-16:
2	
3	What records of management discussions are available to illustrate that the ratepayer's
4	interests are preferred over those of the shareholders and management?
5	
6	Response IR-16:
7	
8	Please refer to NS Power's applications before the Utility and Review Board. In all aspects of
9	management of the utility on a cost of service basis, management is obligated to pursue
10	reasonable and prudent decisions to the benefit of customers in meeting its obligation to serve.

Date Filed: July 23, 2012 NSPI (PC) IR-16 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-17:
2	
3	What research has been done to determine if there are markets for the additional capacity
4	from Muskrat Falls?
5	
6	Response IR-17:
7	
8	Please refer to NSUARB IR-42(a).

Date Filed: July 23, 2012 NSPI (PC) IR-17 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-18:
2	
3	What is the forecasted transmission fee to move electricity from Muskrat Falls through our
4	province to New Brunswick and beyond across our transmission system?
5	
6	Response IR-18:
7	
8	NS Power has not prepared this information as part of this Application.

Date Filed: July 23, 2012 NSPI (PC) IR-18 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-19:
2	
3	Why would Nova Scotia ratepayers be asked to rate base the cost of a \$1.2 billion subsea
4	cable and pay the transmission costs over other NALCOR and NSPI transmission lines to
5	bring power from Muskrat Falls when power can be obtained from other jurisdictions at
6	between 4 and 7 cents a kWh with some less costly transmission upgrades?
7	
8	Response IR-19:
9	
10	Please refer to NSUARB IR-42(a). NS Power is not aware of evidence that supports the premise
11	of this question.

Date Filed: July 23, 2012 NSPI (PC) IR-19 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-20:
2	
3	Has anyone at Nova Scotia Power had any conversations with anyone at the Nova Scotia
4	government about securing more than 20 per cent of the electricity from Nova Scotia
5	Power over 35 years?
6	
7	Response IR-20:
8	
9	Yes.

Date Filed: July 23, 2012 NSPI (PC) IR-20 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-21:
2	
3	What is Nova Scotia Power's role currently in discussions about the Muskrat Falls project
4	and what is its role projected to be in the future?
5	
6	Response IR-21:
7	
8	There are no costs associated with the Maritime Link project included in this Application. This
9	project is being pursued by Emera Newfoundland & Labrador. As appropriate and in accordance
10	with the Affiliate Code of Conduct, NS Power is consulted on the project with respect to matters
11	requiring NS Power input.

Date Filed: July 23, 2012 NSPI (PC) IR-21 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-22:
2	
3	Re: PC IR-3 why does the Annual Capital Spend for Wind go from \$500,000 in 2012 to
4	\$190 million in 2015?
5	
6	Response IR-22:
7	
8	The five year capital investment profile for wind completed at the time of ACE 2012 <sup>1</sup> provided
9	for the construction of a wind project to comply with the Nova Scotia Renewable Electricity
10	Standard.

Date Filed: July 23, 2012 NSPI (PC) IR-22 Page 1 of 1

<sup>&</sup>lt;sup>1</sup> NSPI 2012 Annual Capital Expenditure Plan, NSUARB-NSPI-P-128.12, November 2, 2011.

### **NON-CONFIDENTIAL**

1	Request IR-23:
2	
3	In footnote 5 of PC IR-6, Nova Scotia Power said: "NS Power has not developed this price
4	forecasts for 2015 and 2020 in the preparation of this application." Why?
5	
6	Response IR-23:
7	
8	This Application seeks recovery of costs forecast to occur in the 2013 and 2014 test years.

Date Filed: July 23, 2012 NSPI (PC) IR-23 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-24:
2	
3	Re: PC IR-6 Why is Nova Scotia Power refusing to make transparent the cost of wind per
4	kilowatt hour?
5	
6	Response IR-24:
7	
8	NS Power procures fuel, purchased power, services, and capital equipment in a market that is
9	driven by competitive forces and suppliers looking to create value for themselves. The more a
10	supplier is aware of this commercially sensitive information, the better their ability to obtain the
11	highest price, reduce competition and ultimately increase the cost for NS Power customers.
12	
13	Pricing information could be used by renewable energy suppliers to respond to Requests for
14	Proposals, at prices that could, in the absence of this detailed knowledge, be otherwise lower.
15	The Board has recognized the importance of maintaining confidentiality to protect value for
16	customers in these types of circumstances.

Date Filed: July 23, 2012 NSPI (PC) IR-24 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-25:
2	
3	How much will ratepayers be expected to pay each year (2015 -2023) as the result of
4	deferrals?
5	
5	Response IR-25:
7	
3	Please refer to Liberty IR-39 Attachment 1.

Date Filed: July 23, 2012 NSPI (PC) IR-25 Page 1 of 1

### **NON-CONFIDENTIAL**

1	Request IR-26:
2	
3	What per cent rate increase does Nova Scotia Power forecast each year (2015-2023) to help
4	cover the cost of the deferrals?
5	
6	Response IR-26:
7	
8	Please refer to DE-03 - DE-04 Page 28 of 159, lines 15-18 of the Application where NS Power
9	discusses the Fixed Cost Recovery deferral mechanism and its effect on rates.

### REDACTED

1	Request IR-27:
2	
3	What is the cost per kWh of wind at the 5, 10, 15, 20, 25, 30+ year if built in the last three
4	years:
5	• COMFIT?
6	• Private Company?
7	Nova Scotia Power
8	
9	Response IR-27:
10	
11	Costs were not calculated for 5, 10, 15, 20, 25, 30 + year for the various forms of wind
12	generation as part of this Application.
13	
14	Community Feed-in Tariff (COMFIT)
15	
16	There are no COMFIT wind projects that have been built in the last three years.
17	However, COMFIT rates were set by the Board on September 7, 2011 and are provided
18	in the figure below.
19	Wind > 50 kW   \$0.131 per kWh
20	Wind $\leq 50 \text{ kW}$ $\$0.499 \text{ per kWh}$
21	A Drivete Company
22	Private Company
23	Of the Independent Power Producers built in the last three years, the minimum and
24	maximum costs are provided in the table below. The majority of these companies have
25	fixed rates for the duration of their contracts, which range from expiry in through to

Date Filed: July 23, 2012

#### **REDACTED**

1	
2	
3	
	Minimum
	Maximum
4	

5 • NS Power

6

NS Power had two wholly owned wind sites built in the last three years. Their levelized costs along with the estimated remaining life of the site, are provided in the table below and are as submitted in NS Power's Applications to the Board for these projects. Note: levelized costs refer to an economic assessment of the cost of the energy-generating system including all the costs over its lifetime: initial investment, operations and maintenance, cost of fuel, and cost of capital.

Digby \$0.082 per kWh 18 year life

Nuttby \$0.075 per kWh 21 year life

14

8

9

10

11

12

13

### **NON-CONFIDENTIAL**

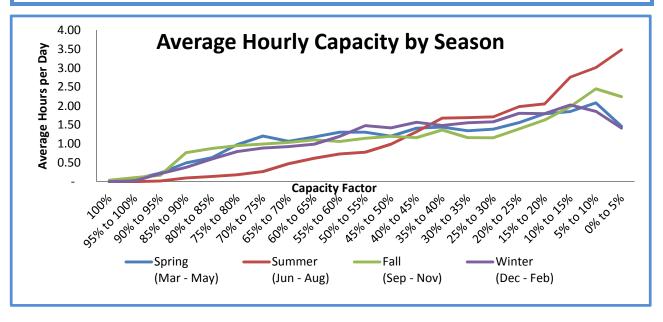

1	Request IR-28:
2	
3	What is the net cost per kWh for delivering wind generated electricity to a customer over a
4	year if you add the costs of maintaining and providing back up electricity?
5	
6	Response IR-28:
7	
8	The cost for maintaining and providing back up electricity for intermittent wind generation is not
9	measured specifically because the sources of back-up generation are also utilized for other
10	purposes such as serving load, power system reserve requirements and providing economic fuel
11	switching capability.
12	
13	NS Power is currently conducting a Renewable Energy Integration Study, which will determine
14	changes in system costs as more renewable generation is added to the power system. The study
15	will not specifically determine the capital cost of additional back-up generation or power system
16	modifications required due to increasing levels of wind generation. The results from this study
17	will, however, be used in future work to determine the capital costs for system modifications
18	required to back-up the wind generation on the NS Power system. Together, the system costs
19	and capital costs can be used in determining the total cost for delivering wind generated
20	electricity to customers.

Date Filed: July 23, 2012 NSPI (PC) IR-28 Page 1 of 1

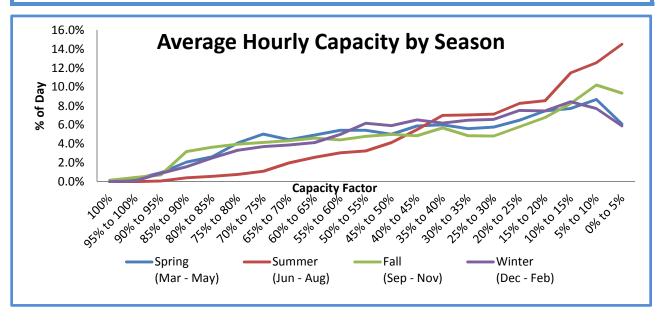

### **NON-CONFIDENTIAL**

1	Request IR-29:
2	
3	How often is wind at 100pc, 95pc down to 0pc expressed as average hours per day in
4	winter, summer, spring and fall?
5	
6	Response IR-29:
7	
8	Please refer to Attachment 1 which provides wind capacity as average hours per day in winter
9	(December through February), summer (June through August), spring (March through May) and
10	fall (September through November). The data tables and graphs consist of average hourly
11	capacity from May 1, 2010, through April 30, 2012, first presented as average hours per day and
12	season as requested, then also as a percentage.
